# Worksheet

The Mind Tools SWOT analysis worksheet breaks down the framework into four distinct quadrants:

## Strengths

Strengths refer to internal factors that give you an advantage over others. This can include resources, skills, technologies, or unique capabilities.

\*Example prompts in the worksheet might ask:\*

- What do you or your business do well?
- Which resources or assets set you apart?
- What positive feedback have you received consistently?

Identifying strengths helps you leverage what's already working in your favor.

## Weaknesses

Weaknesses are internal limitations or areas where improvement is needed. Being honest in this section is crucial for genuine growth.

\*The worksheet encourages questions like:\*

- What could be improved internally?
- Are there skill gaps or resource shortages?
- What do competitors do better than you?

Acknowledging weaknesses allows for targeted strategies to mitigate risks.

## Opportunities

Opportunities are external chances to improve performance or expand reach. These might involve market trends, technological advances, or untapped customer segments.

\*Typical worksheet prompts include:\*

- What trends can you capitalize on?
- Are there emerging markets or partnerships worth exploring?
- How can you turn challenges into opportunities?

Spotting opportunities can lead to innovative strategies that boost success.

## Threats

Threats encompass external factors that could jeopardize your success, such as competition, regulatory changes, or economic downturns.

\*Questions to consider:\*

- What obstacles do you face in the market?
- Are there changes in consumer behavior that may impact you?
- How do competitors pose a risk?

Understanding threats helps in developing contingency plans.

**mind tools swot analysis worksheet:** Monograph Association SEPIKE Association SEPIKE, 2020-02-10 In the globalized world under rapidly developing conditions of the digital economy, it is almost impossible to keep pace with the multi-dimensional informational flow that appears daily on the Internet and in real life. Scientists whose papers and researches are dedicated to the innovation issues, their different types, life cycles, evaluation of effectiveness and practical applicability, all of them agreed on the appearance of so called unclassifiable digital innovations. We have to be precise with this definition. First, digital innovations have penetrated inside all spheres of life and business nowadays. It is impossible to make any operation without using modern advanced technologies (actually, they are traced from being advanced not so far till usual/adapted/everyday). And the main criterion making innovations 'everyday' is the time. Whether it's the simplest operation of searching for a geographical location, the operation of buying or selling, the simplest transaction, communication, or the complicated operation of managing a business based on the business modeling, the use of modern marketing digital technologies, modeling of the ecological future and building long-term forecasts, all of abovementioned requires Internet usage, modern devices or other smart technologies. Thus, such variety of activity leads to complexity of digital innovation classification. Second, digital space is unlimited and unlimited by its nature that results just in generalization of common categorical directions. Third, each process, activity or even action take place in a concrete condition. It should be said, world economy transit to a personalized level, i.e. move from macro- via meso-, throughout of micro- to the digitally behavioral economics. That is why, in our opinion, it is difficult to classify digital innovations. Nowadays, it is not a top secret that with rapid digitalization paces, governments miss effective tools of regulation or intervention. More and more scientific publications, personal blogs and journalistic reports expose the problem of government insolvency in its intervention policies and the unjustifiedness of their actions. Neoclassic, neo-monetarist, neo-institutional and other neo-economic theories are unable to explain today's rapidly changing situation around the globe. They have exhausted themselves: there is no panacea that can revive the mega-economies of the highly developed countries that are sluggishly falling into the recession.
