the first 48 full episodes 2013 youtube: Shakespeare and YouTube Stephen O'Neill, 2014-04-24 The video-sharing platform YouTube signals exciting opportunities and challenges for Shakespeare studies. As patron, distributor and archive, YouTube occasions new forms of user-generated Shakespeares, yet a reduced Bard too, subject to the distractions of the contemporary networked mediascape. This book identifies the genres of YouTube Shakespeare, interpreting them through theories of remediation and media convergence and as indices of Shakespeare's shifting cultural meanings. Exploring the intersection of YouTube's participatory culture - its invitation to 'Broadcast Yourself' - with its corporate logic, the book argues that YouTube Shakespeare is a site of productive tension between new forms of self-expression and the homogenizing effects of mass culture. Stephen O'Neill unfolds the range of YouTube's Bardic productions to elaborate on their potential as teaching and learning resources. The book importantly argues for a critical media literacy, one that attends to identity constructions and to the politics of race and gender as they emerge through Shakespeare's new media forms. Shakespeare and YouTube will be of interest to students and scholars of Shakespearean drama, poetry and adaptations, as well as to new media studies.

Dennis Moser, Susan Dun, 2019-01-04 This volume was first published by Inter-Disciplinary Press in 2014. Cyberculture and cyberspace have become part of our realities. This is an inescapable fact. Their digital technologies have come to underpin many aspects of our lives, our history, and our future. Already, these technologies exert considerable influence upon the institutions and structure of our societies, including those that define our concepts of art and aesthetics, our social interactions, societal and individual remembrance, even how we govern and are governed. Cyberculture's ubiquity raises questions of our concepts of being and aloneness. Can we experience solitude if we are all connected? Will the natural state of being soon be 'always on, always connected?' To remember everything, is it a blessing or a curse? Is the promise of digital 'immortality' possible or even desirable? When do we cease mourning, if the dead are memorialized in digital perpetuity? Within this volume is a collection of essays from an international group of scholars, artists, and practitioners who address these and other questions about our future, looking at where we have come in our past.

The Handbook pays particular attention to countries that have leapt out of the political shadows of dominant and better-studied neighbours in the course of the unfolding uprisings in the Middle East and North Africa. These dramatic and interconnected developments have exposed the dearth of informative analysis available in surveys and textbooks, particularly on Tunisia, Libya, Yemen, Bahrain and Syria.

the first 48 full episodes 2013 youtube: Individuality in music performance Bruno Gingras, 2014-10-22 Humans are remarkably adept at identifying individuals on the basis of their facial features, or other traits such as gait or vocal timbre. Besides voice, another auditory medium capable of carrying identity information is music. Indeed, certain famous musicians, such as John Coltrane or Sonny Rollins, need only to play a few notes to be unequivocally recognized. Along with emotion and structural cues, artistic individuality seems to be a key element communicated in music performance. Yet, the means by which individuality is expressed in performance, as well as the cognitive processes employed by listeners to perceive identity cues, remain poorly elucidated. Other pertinent issues, including the connection between a performer's technical competence and ability to convey a specific musical identity, as well as potential links between individuality and career-defining outcomes such as critical recognition and aesthetic appraisal, warrant further exploration. Quantitative approaches to the study of music performance have benefited greatly from MIDI technology and the application of computational methods, leading to the flourishing of empirical music performance research over the last few decades. More recently, neuroimaging techniques have provided valuable insights into the neural mechanisms involved in the cognitive processes of performing music. Nevertheless, this field continues to benefit greatly from qualitative approaches, given that the communication of affect and identity cues in music performance leads to a rich subjectivity of impressions that must be accounted for in order to lead to a greater understanding of this multifaceted phenomenon. The aim of this Research Topic is to provide a forum for interdisciplinary research broadly related to the expression and perception of individuality in music performance. Research methodology includes behavioral, psychophysiological, and neuroimaging techniques. Both quantitative and qualitative approaches are presented The scope of this Research Topic includes laboratory studies as well as studies in real-life performance settings and longitudinal studies on performers.
