

journal of plant physiology

Journal of Plant Physiology: Unlocking the Secrets of Plant Life

journal of plant physiology serves as a vital resource for researchers, educators, and enthusiasts passionate about understanding the intricate processes that govern plant life. This scientific publication dives deep into the physiological mechanisms, biochemical pathways, and environmental interactions that influence plant growth, development, and adaptation. Whether you are a seasoned botanist or a curious learner, exploring the content within the journal of plant physiology offers a comprehensive window into the dynamic world of plant science.

What is the Journal of Plant Physiology?

The journal of plant physiology is a peer-reviewed scientific periodical dedicated to publishing cutting-edge research on plant function. It covers a broad spectrum of topics ranging from cellular processes and molecular biology to whole-plant physiology and ecological interactions. The journal acts as a bridge connecting laboratory discoveries with practical applications in agriculture, forestry, and environmental management.

Since its inception, the journal has established itself as a reputable source for original articles, reviews, and critical discussions that advance the collective understanding of how plants operate at multiple levels. Its multidisciplinary nature invites contributions from biochemists, molecular biologists, ecologists, and agronomists alike.

Key Focus Areas Covered in the Journal of Plant Physiology

The scope of the journal is vast, reflecting the complexity of plant life. Below are some prominent themes regularly explored within its pages:

Photosynthesis and Energy Metabolism

One of the cornerstone topics in plant physiology is photosynthesis — the process by which plants convert light energy into chemical energy. The journal frequently features studies that unravel the molecular machinery of photosystems, carbon fixation pathways, and factors influencing photosynthetic efficiency. Understanding these processes is crucial for improving crop yields and developing plants resilient to environmental stresses.

Plant Hormones and Growth Regulation

Plant hormones, or phytohormones, such as auxins, gibberellins, cytokinins, and abscisic acid,

regulate growth and development. The journal of plant physiology offers insights into hormone biosynthesis, signaling pathways, and their roles in stress responses. These findings can inform biotechnological approaches to manipulate plant growth for enhanced productivity.

Stress Physiology and Environmental Adaptation

Plants constantly face challenges like drought, salinity, temperature extremes, and pathogen attacks. Research published in the journal investigates how plants perceive stress signals, activate defense mechanisms, and adapt to changing environments. Such knowledge is pivotal for breeding stress-tolerant crops and safeguarding ecosystems.

Cellular and Molecular Mechanisms

At the cellular level, the journal explores membrane transport, enzyme function, gene expression, and protein interactions that underpin physiological processes. Molecular techniques, including genomics and proteomics, have enriched this field, allowing researchers to dissect complex networks regulating plant function.

Why Researchers and Students Rely on the Journal of Plant Physiology

Accessing the journal of plant physiology provides several advantages for academics and practitioners in plant sciences:

- **Authoritative Content:** All articles undergo rigorous peer review, ensuring high-quality, reliable information.
- **Interdisciplinary Insights:** The journal integrates knowledge from various subfields, fostering a holistic understanding of plants.
- **Latest Discoveries:** It keeps readers abreast of emerging trends, novel methodologies, and breakthrough findings.
- **Practical Applications:** Many studies translate basic science into innovations for agriculture, horticulture, and environmental conservation.

For students, the journal is an excellent reference for coursework, research projects, and staying connected to the scientific community. For researchers, it offers a platform to disseminate findings and engage with peers worldwide.

How to Make the Most of Reading the Journal of Plant Physiology

Diving into scientific journals can be daunting, but with a strategic approach, you can extract maximum value from the journal of plant physiology.

Focus on Review Articles First

Review papers summarize existing knowledge on specific topics and often highlight future research directions. Starting with reviews can provide a solid foundation before tackling original research articles.

Take Notes on Key Concepts and Terminology

Plant physiology involves specialized vocabulary. Keeping a glossary of terms and jotting down main ideas helps reinforce learning and aids in comprehension.

Relate Findings to Practical Contexts

Try to connect research insights to real-world problems, such as improving crop resistance or understanding ecosystem dynamics. This approach enhances relevance and retention.

Stay Updated with Special Issues and Thematic Collections

The journal occasionally publishes special editions focusing on emerging themes like climate change impacts on plants or advances in plant biotechnology. These collections can offer concentrated knowledge on pressing topics.

Impact of the Journal of Plant Physiology on Agricultural and Environmental Sciences

The research disseminated by the journal has far-reaching implications beyond academia. As global challenges such as food security and climate change intensify, understanding plant physiology becomes even more critical.

Innovations stemming from studies published in the journal contribute to:

- Developing drought- and heat-tolerant crop varieties

- Enhancing nutrient use efficiency to reduce fertilizer dependence
- Elucidating plant-microbe interactions for sustainable agriculture
- Informing conservation strategies for endangered plant species
- Improving carbon sequestration through optimized plant growth

By advancing fundamental and applied knowledge, the journal of plant physiology supports efforts to create resilient agricultural systems and maintain biodiversity.

Accessing the Journal of Plant Physiology and Related Resources

Most researchers access the journal through university libraries or online scientific databases such as ScienceDirect or SpringerLink. Many institutions offer subscriptions that provide full-text access to articles.

For those without institutional access, some articles may be available as open access or through author repositories. Additionally, platforms like ResearchGate sometimes host preprints or post-publication versions shared by authors.

To complement reading the journal, consider exploring related publications in plant sciences, such as:

- Plant Physiology (American Society of Plant Biologists)
- The Plant Journal
- Physiologia Plantarum
- Journal of Experimental Botany

These journals also delve into various aspects of plant biology, broadening your perspective on the field.

Final Thoughts on Engaging with the Journal of Plant Physiology

The journal of plant physiology remains an indispensable resource for anyone eager to unravel the complexities of plant life. Its blend of fundamental research and applied studies fosters a deeper appreciation for how plants function and adapt in a changing world. Whether you are advancing

scholarly research or seeking to apply plant science knowledge practically, immersing yourself in this journal's rich content can be both inspiring and enlightening. Embracing ongoing discoveries in plant physiology not only fuels academic curiosity but also equips us to address some of the planet's most critical environmental and agricultural challenges.

Frequently Asked Questions

What is the Journal of Plant Physiology?

The Journal of Plant Physiology is a peer-reviewed scientific journal that publishes research articles on all aspects of plant physiology, including molecular, cellular, and whole-plant physiology.

Who publishes the Journal of Plant Physiology?

The Journal of Plant Physiology is published by Elsevier, a leading provider of scientific, technical, and medical information.

What types of articles are accepted in the Journal of Plant Physiology?

The journal accepts original research articles, reviews, and short communications related to plant physiology and biochemistry.

Is the Journal of Plant Physiology an open access journal?

The Journal of Plant Physiology offers both subscription-based and open access publishing options, allowing authors to choose open access for wider dissemination.

How can I submit a manuscript to the Journal of Plant Physiology?

Manuscripts can be submitted online through the journal's official submission system on the Elsevier website, following their submission guidelines.

What is the impact factor of the Journal of Plant Physiology?

As of recent reports, the Journal of Plant Physiology has an impact factor typically ranging around 4 to 5, reflecting its influence in the field of plant sciences.

Which research areas are covered by the Journal of Plant Physiology?

The journal covers areas such as photosynthesis, plant metabolism, signal transduction, stress physiology, growth regulation, and molecular plant physiology.

How often is the Journal of Plant Physiology published?

The Journal of Plant Physiology is published monthly, providing timely dissemination of research findings in plant physiology.

Can I access the Journal of Plant Physiology articles for free?

Some articles are available as open access and can be read for free, while others require a subscription or purchase to access full content.

How does the Journal of Plant Physiology contribute to plant science research?

By publishing high-quality, peer-reviewed research, the journal advances understanding of plant physiological processes and supports developments in agriculture, biotechnology, and environmental science.

Additional Resources

Journal of Plant Physiology: A Crucial Resource in Botanical Sciences

Journal of plant physiology stands as a pivotal publication in the realm of botanical sciences, providing a dedicated platform for the dissemination of cutting-edge research focused on the physiological processes of plants. As plant physiology continues to evolve with advancing technologies and increasing environmental challenges, this journal remains central to scholars, researchers, and professionals seeking comprehensive insights into plant function, adaptation, and development.

Overview of the Journal of Plant Physiology

The Journal of Plant Physiology is a peer-reviewed scientific journal that has garnered respect and recognition for its rigorous editorial standards and wide-ranging content. It explores various facets of plant biology, emphasizing physiological mechanisms at molecular, cellular, tissue, and whole-plant levels. Established decades ago, the journal has consistently published influential studies that contribute to understanding photosynthesis, respiration, water relations, nutrient uptake, hormone action, and stress physiology.

Serving both fundamental and applied research, the journal appeals to a diverse audience including academic researchers, agronomists, horticulturists, and environmental scientists. Its interdisciplinary nature allows it to bridge gaps between molecular biology, biochemistry, ecology, and agriculture, making it a comprehensive resource for various plant science disciplines.

Scope and Thematic Coverage

The journal covers an extensive array of topics within plant physiology. Key areas include:

- Photosynthetic processes and their regulation
- Plant-water relations and drought stress responses
- Mineral nutrition and ion transport
- Signal transduction pathways and hormone regulation
- Plant responses to biotic and abiotic stresses
- Developmental physiology and growth dynamics
- Metabolic pathways and energy conversion

This broad scope ensures that the journal remains relevant to emerging trends and challenges such as climate change impact on plant health, crop improvement strategies, and sustainable agriculture.

Impact and Relevance in Scientific Community

The Journal of Plant Physiology holds a strong position in the academic landscape, with a significant impact factor that reflects its influence and citation frequency. It competes alongside other prominent journals in plant sciences, such as *Plant Physiology*, *Physiologia Plantarum*, and *Plant, Cell & Environment*, but distinguishes itself through its focused approach on physiological processes.

Its rigorous peer-review process ensures that only high-quality, methodologically sound research is published. This commitment to excellence has fostered trust and reliance among researchers worldwide. Moreover, the journal's accessibility through various indexing services and digital platforms enhances its reach and visibility.

Accessibility and Publishing Model

The journal adopts a hybrid publishing model, offering both subscription-based access and open access options. This flexibility allows authors to choose the dissemination route that maximizes their research visibility while balancing costs. The availability of supplementary materials, high-resolution figures, and data sets further enriches the reader's experience and aids in reproducibility.

Additionally, the journal is indexed in major databases such as PubMed, Scopus, and Web of Science, facilitating easy discovery and citation tracking. Its commitment to rapid publication timelines without compromising quality is often highlighted as a significant advantage for researchers eager to share timely findings.

Comparative Analysis: Journal of Plant Physiology vs. Other Journals

When comparing the Journal of Plant Physiology to peer publications, several distinguishing features emerge:

- **Specialization:** While some journals cover broad plant science topics, this journal's focus on physiological aspects offers depth and detail that specialists appreciate.
- **Interdisciplinary Content:** It successfully integrates molecular biology with whole-plant physiology, enabling cross-disciplinary insights.
- **Impact Factor and Citation Metrics:** Though not always the highest, the journal maintains consistent citation rates, indicative of its respected status.
- **Publication Speed:** Authors often note the balance between thorough peer review and prompt publication as a competitive advantage.

However, some researchers may prefer journals with a broader scope or those focused more intensively on molecular genetics or ecological aspects, depending on their specific research interests.

Audience and Contributor Profile

The journal primarily attracts:

1. Academic researchers investigating fundamental plant physiological processes.
2. Applied scientists working on crop improvement and stress tolerance.
3. Graduate students seeking to publish thesis-related findings.
4. Industry professionals interested in plant-based biotechnology.

This diverse contributor base enriches the journal's content with a variety of perspectives and experimental approaches, fostering innovation and knowledge exchange.

Role in Advancing Plant Science Research

The Journal of Plant Physiology plays an instrumental role in advancing plant science by:

- Highlighting new discoveries about plant responses to environmental stresses such as drought, salinity, and temperature extremes.
- Providing insights into the molecular basis of plant development and growth regulation.
- Supporting research on sustainable agricultural practices through studies on nutrient use efficiency and pest resistance.
- Encouraging interdisciplinary collaboration by publishing studies that connect physiology with genetics, biochemistry, and ecology.

These contributions are vital as global food security and ecosystem health become increasingly dependent on understanding and improving plant performance under changing climatic conditions.

Technological Integration and Future Directions

Recent volumes of the journal have showcased research employing advanced technologies such as:

- High-throughput phenotyping to assess plant traits at scale.
- Genomic and transcriptomic analyses to elucidate gene function in physiological processes.
- Imaging techniques like chlorophyll fluorescence and confocal microscopy for detailed cellular studies.
- Mathematical modeling to predict plant responses under variable environmental factors.

Such integration of technology reflects the journal's commitment to staying at the forefront of plant physiology research. Future directions likely include expanded coverage of synthetic biology applications, climate resilience mechanisms, and systems biology approaches.

The Journal of Plant Physiology remains an indispensable resource for anyone invested in understanding the complex biological functions of plants. Its ongoing dedication to quality, breadth, and innovation ensures it will continue shaping the landscape of plant science for years to come.

journal of plant physiology: International Journal of Plant Physiology , 1917

journal of plant physiology: International journal of plant physiology , 1926

journal of plant physiology: Advances in Plant Physiology (Vol. 8) A. Hemantaranjan, 2006-07-01 The publication of Volume 8 of the International Treatise Series on Advances in Plant Physiology has been feasible - exclusively and unquestionably due to commendable contributions from World Scientists of distinction in explicit fields. within eight years, the treatise series has been instituted in the spirits and compassion of illustrious readers all through the world. The proficient International and National Co-ordinators have all along unified their views for the expediency of readers assisting them to speed up important research work in the field of Plant and Crop Physiology, Biochemistry & Plant Molecular Biology. in spite of handiness of quick accessibility of vast literature from internet, this treatise series in the field of life sciences has been realized over and above to be like a true guide, friend and philosopher, everlastingly enlightening the most hidden perceptible nerves of an individual worker, which is beyond the competence of mere web services. The volume 8 is absolutely another one of its kinds for incorporation of most timely and important worthy reviews of diverse objectives contributed by forty four well-informed, admirable and documented scientists/ stalwarts, of which twenty three participated from abroad. The original writing coming in bounteous journals of international repute covering new technologies and tools in plant science research have been pulled together in affirmative, prolific and supportive manner by specialists all over the globe. In this volume efforts have been made to fetch together twenty one indispensable review articles, duly evaluated by the respective Consulting Editors of international stature from India, U.K., U.S.A., Argentina, Australia, France, Germany, Japan, Spain, Portugal, Israel, and Morocco and rationally distributed in eight sections. Indeed, the treatise is wealth for interdisciplinary exchange of information. Apart from fulfilling need of this kind of exclusive edition in different volumes for research teams in Molecular Plant Physiology and Biochemistry in traditional and agricultural universities, institutes and research laboratories throughout the world, it would be extremely a constructive book and a voluminous reference material for acquiring advanced knowledge by post-graduate and Ph.D. scholars in response to the innovative courses in Plant Physiology, Plant Biochemistry, Plant Molecular Biology, Plant Biotechnology, Environmental Sciences, Plant Pathology, Microbiology, Soil Science & Agricultural Chemistry, Agronomy, Horticulture, and Botany.

journal of plant physiology: Australian Journal of Plant Physiology , 1988

journal of plant physiology: Russian Journal of Plant Physiology , 1996

journal of plant physiology: Advances in Plant Physiology (Vol. 11) A. Hemantaranjan, 2009-01-01 The configuration of Volume 11 of the International Treatise Series has been absolutely due to praiseworthy contributions from Scientists of global eminence. This programme has been undertaken with a view to reinforce the indistinguishable efforts to recognize the outcome of scrupulous research in some of the very rational and stirring areas of Environmental and Molecular Physiology of Plants. In order to sustain and further advance, it is committed to maintain the originality and the introduction of novel ideas, ensuring that the treatise welcomes the best science done across the full extent of modern plant biology, in general, and plant physiology, in particular. Indeed, within the time span of twelve years, this treatise has been duly recognized through Current Book Contents and other academic periodicals in the minds of distinguished readers and has beyond doubt achieved the international status. It is reiterated that in spite of handiness of quick accessibility of vast literature from internet, this treatise series in the field of life sciences has been realized over and above to be like a true guide, friend and philosopher, continually enlightening the most hidden perceptible nerves of an individual worker, which is beyond the competence of mere internet web service. It is glory to record that in Volume 11, with inventive applied research, attempts have been made to bring together much needed fifteen review articles by Fifty-eight contributors from Brazil, China, Egypt, France, Germany, India, Switzerland and Tunisia; duly evaluated by Consulting Editors of international stature from India, U.K., U.S.A., Argentina,

Australia, France, Germany, Japan, Spain, Portugal, Israel, and Morocco and rationally disseminated in Seven Sections. Creditably in this volume, over five important reviews belong to the field of Environmental Stresses besides covering significant areas of research. In genuineness, the treatise is an achievement for interdisciplinary exchange of information. It would be extremely a significant book and a voluminous reference material for acquiring advanced knowledge by post-graduate and Ph.D. scholars in response to the innovative courses in Plant Physiology, Plant Biochemistry, Plant Molecular Biology, Plant Biotechnology, Environmental Sciences, Plant Pathology, Microbiology, Soil Science & Agricultural Chemistry, Agronomy, Horticulture, and Botany, besides fulfilling needs for research teams and scientists engaged in various facets of research in Molecular Physiology and Biology of Plants in traditional and agricultural universities, institutes and research laboratories throughout the world.

journal of plant physiology: Brazilian Journal of Plant Physiology , 2003

journal of plant physiology: *Indian Journal of Plant Physiology* , 1983

journal of plant physiology: Advances in Plant Physiology (Vol. 17) A. Hemantaranjan, 2017-04-01 The conception of Volume 17 of the International Treatise Series on Advances in Plant Physiology has been made possible entirely due to worthy contributions from World Scientists, teachers and researchers of eminence in unequivocal fields. Scientists are well in search of specific and complete literature pertaining to meaningful research for the holistic development of agriculture. The undertaking of this Treatise Series on Plant Physiology is to genuinely categorize the insufficiencies in view of mounting consequential researches for increasing productivity, prosperity and sustainability of agriculture through influential and developing technologies for restructuring metabolic limitations most responsive to abiotic stress factors. Certainly, our idea is to recognize innovative science of value across the broad disciplinary range of the treatise. The aim is to make stronger the distinctive outcome of conscientious research in some of the very sensitive areas of Plant Physiology-Plant Molecular Physiology/ Molecular Biology that broadly highlights the recent developments and mechanisms underlying plant resilience to changing environments. This volume brings collectively much needed twenty-one review articles by fifty-one dedicated contributors for this volume assorted into five relevant sections, viz., Section I: Abiotic Stresses & Plant Productivity: Physiological & Molecular Perspectives; Section II: Plant Trace Elements in Plant Physiology; Section III: Plant Functions Research in Agricultural Progression; Section IV: Physiological Basis of Yield; Section V: Nutraceuticals, Medicinal & Aromatic Plant Wealth. This is commendable that the Volume 17 deals with challenges of ongoing international concern over the abiotic stresses under changing climate besides vital aspects related to image-based plant phenotyping; phenomics and its application in physiological breeding; trace elements; plant functions; physiological basis of yield variation; medicinal and aromatic plants and so on. Apart from fulfilling the acute need of this kind of select edition in different volumes for research teams and scientists engaged in various facets of plant sciences research in traditional and agricultural universities, institutes and research laboratories throughout the world, it would be extremely a constructive book and a voluminous reference material for acquiring advanced knowledge by post-graduate and Ph.D. scholars in response to the innovative courses in Plant Physiology, Plant Biochemistry, Plant Molecular Biology, Plant Biotechnology, Environmental Sciences, Plant Pathology, Microbiology, Soil Science & Agricultural Chemistry, Agronomy, Horticulture, and Botany.

journal of plant physiology: Journal of Plant Biology , 1999

journal of plant physiology: Advances In Plant Physiology (Vol. 5) A. Hemantaranjan, 2003-07-01 The publication of Volume 5 of the International Treatise Series on Advances in Plant Physiology has been feasible - exclusively and unquestionably due to commendable contributions from World Scientists of distinction in explicit fields. within eight years, the treatise series has been instituted in the spirits and compassion of illustrious readers all through the world. The proficient International and National Co-ordinators have all along unified their views for the expediency of readers assisting them to speed up important research work in the field of Plant and Crop

Physiology, Biochemistry & Plant Molecular Biology. in spite of handiness of quick accessibility of vast literature from internet, this treatise series in the field of life sciences has been realized over and above to be like a true guide, friend and philosopher, everlastingly enlightening the most hidden perceptible nerves of an individual worker, which is beyond the competence of mere web services. The volume 8 is absolutely another one of its kinds for incorporation of most timely and important worthy reviews of diverse objectives contributed by forty four well-informed, admirable and documented scientists/ stalwarts, of which twenty three participated from abroad. The original writing coming in bounteous journals of international repute covering new technologies and tools in plant science research have been pulled together in affirmative, prolific and supportive manner by specialists all over the globe. In this volume efforts have been made to fetch together twenty one indispensable review articles, duly evaluated by the respective Consulting Editors of international stature from India, U.K., U.S.A., Argentina, Australia, France, Germany, Japan, Spain, Portugal, Israel, and Morocco and rationally distributed in eight sections. Indeed, the treatise is wealth for interdisciplinary exchange of information. Apart from fulfilling need of this kind of exclusive edition in different volumes for research teams in Molecular Plant Physiology and Biochemistry in traditional and agricultural universities, institutes and research laboratories throughout the world, it would be extremely a constructive book and a voluminous reference material for acquiring advanced knowledge by post-graduate and Ph.D. scholars in response to the innovative courses in Plant Physiology, Plant Biochemistry, Plant Molecular Biology, Plant Biotechnology, Environmental Sciences, Plant Pathology, Microbiology, Soil Science & Agricultural Chemistry, Agronomy, Horticulture, and Botany.

journal of plant physiology: Advances in Plant Physiology (Vol.13) A. Hemantaranjan, 2012-08-01 The plant physiology and plant molecular biology research group has evidently endorsed the new directions taken by the treatise to attract the pre-eminent scientists in plant biology/plant sciences. Certainly, the preparation of Volume 13 of the International Treatise Series on Advances in Plant Physiology has been done entirely due to commendable contributions from Scientists of Eminence in unequivocal fields. Unquestionably, our objective is to publish innovative science of value across the broad disciplinary range of the treatise. I restate that this plan has been undertaken with a view to strengthen the indistinguishable efforts to recognize the outcome of meticulous research in some of the very sensible and stirring areas of Plant Physiology-Plant Molecular Physiology/ Biology-Plant Biochemistry for holistic development of the science of agriculture and crop production under changing climate. I am ardent to keep on the exceptionality and the prologue of excellent new ideas ensuring that the treatise calls to the best science done across the full extent of modern plant biology, in general, and plant physiology, in particular. In Volume 13, with inventive applied research, attempts have been made to bring together much needed eighteen review articles by forty-eight contributors especially from premier institutions of India for this volume. All the eighteen review articles have been grouped in five broad sections, which on the whole highlight the necessity to find out evidence from the fields of plant nutriophysiology (physiology of plant mineral nutrients) and abiotic stresses under changing climate along with their control.

journal of plant physiology: Advances in Plant Physiology (Vol.15) A. Hemantaranjan, 2014-12-01 In view of changes in the global environment, it is important to determine and developing technologies to ameliorate metabolic limitations by biological processes most sensitive to abiotic stress factors warning crop productivity. It is reaffirmed that publishing the important Treatise Series has been undertaken with a view to identify the inadequacies under varied environments and to scientifically extend precise and meaningful research so that the significant outcomes including new technologies are judiciously applied for requisite productivity, profitability and sustainability of agriculture. Besides this, meticulous research in some of the very sensible and stirring areas of Plant Physiology-Plant Molecular Physiology are indispensably needed for holistic development of agriculture and crop production in different agro-climatic zones. Ardently, this is also to focus upon excellent new ideas ensuring the best science done across the full extent of modern plant biology, in general, and plant physiology, in particular. In Volume 14, with inventive

applied research, attempts have been made to bring together much needed eighteen remarkable review articles distributed in three appropriate major sections of Nutriophysiology and Crop Productivity, Plant Responses to Changing Environment and Environmental Stresses and Technological Innovations in Agriculture written by thirty four praiseworthy contributors of eminence in unequivocal fields mainly from premier institutions of India and abroad. In reality, the Volume 14 of the Treatise Series is wealth for interdisciplinary exchange of information particularly in the field of nutriophysiology and abiotic stresses for planning meaningful research and related education programmes in these thrust areas. Apart from fulfilling the heightened need of this kind of select edition in different volumes for research teams and scientists engaged in various facets of research in Plant Physiology/Plant Sciences in traditional and agricultural universities, institutes and research laboratories throughout the world, it would be tremendously a productive reference book for acquiring advanced knowledge by post-graduate and Ph.D. scholars in response to the innovative courses in Plant Physiology, Plant Biochemistry, Plant Molecular Biology, Plant Biotechnology, Environmental Sciences, Plant Pathology, Microbiology, Soil Science & Agricultural Chemistry, Agronomy, Horticulture, and Botany.

journal of plant physiology: Advances in Plant Physiology (Vol. 10) A. Hemantaranjan, 2008-07-01 Dr. S.K. Panda & Dr. (Mrs.) M. Dash This book ``Advances in Stress Physiology of Plants' has been published with an aim to give some insight into the field of stress physiology of Plants. Attempts have been made to highlight different abiotic stresses like water, salt, heavy metals etc. and there effects on plants physiological alterations. journal of plant physiology: Plant Adaptation to Environmental Change Naser A. Anjum, Sarvajeet Singh Gill, Ritu Gill, 2014-01-10 Plants constantly cope with unfavourable ecosystem

conditions, which often prevent them reaching their full genetic potential in terms of growth, development and productivity. This book covers plants' responses to these environmental changes, namely, the modulation of amino acids, peptides and amines to combat both biotic and abiotic stress factors. Bringing together the most recent developments, this book is an important resource for researchers and students of crop stress and plant physiology.

journal of plant physiology: Routledge Handbook of Urban Forestry Francesco Ferrini, Cecil C. Konijnendijk van den Bosch, Alessio Fini, 2017-03-31 More than half the world's population now lives in cities. Creating sustainable, healthy and aesthetic urban environments is therefore a major policy goal and research agenda. This comprehensive handbook provides a global overview of the state of the art and science of urban forestry. It describes the multiple roles and benefits of urban green areas in general and the specific role of trees, including for issues such as air quality, human well-being and stormwater management. It reviews the various stresses experienced by trees in cities and tolerance mechanisms, as well as cultural techniques for either pre-conditioning or alleviating stress after planting. It sets out sound planning, design, species selection, establishment and management of urban trees. It shows that close interactions with the local urban communities who benefit from trees are key to success. By drawing upon international state-of-art knowledge on arboriculture and urban forestry, the book provides a definitive overview of the field and is an essential reference text for students, researchers and practitioners.

journal of plant physiology: Crop Adaptation to Climate Change Shyam Singh Yadav, Robert J. Redden, Jerry L. Hatfield, Hermann Lotze-Campen, Anthony E. Hall, 2011-08-02 A major task of our time is to ensure adequate food supplies for the world's current population (now nearing 7 billion) in a sustainable way while protecting the vital functions and biological diversity of the global environment. The task of providing for a growing population is likely to be even more difficult in view of actual and potential changes in climatic conditions due to global warming, and as the population continues to grow. Current projections suggest that the world's temperatures will rise 1.8-4.0 by 2100 and population may reach 8 billion by the year 2025 and some 9 billion by mid-century, after which it may stabilize. This book addresses these critical issues by presenting the science needed not only to understand climate change effects on crops but also to adapt current agricultural systems, particularly in regard to genetics, to the changing conditions. Crop Adaptation to Climate Change covers a spectrum of issues related to both crops and climatic conditions. The first two sections provide a foundation on the factors involved in climate stress, assessing current climate change by region and covering crop physiological responses to these changes. The third and final section contains chapters focused on specific crops and the current research to improve their genetic adaptation to climate change. Written by an international team of authors, Crop Adaptation to Climate Change is a timely look at the potentially serious consequences of climate change for our global food supply, and is an essential resource for academics, researchers and professionals in the fields of crop science, agronomy, plant physiology and molecular biology; crop consultants and breeders; as well as climate and food scientists.

journal of plant physiology: *Bibliography of Agriculture* , 1990

journal of plant physiology: Advances in Plant Physiology (Vol. 9) A. Hmantaranjan, 2007-01-01 The configuration of Volume 9 of the International Treatise Series has been done absolutely due to commendable contributions from World Scientists of eminence in unambiguous fields. Amazingly, within the time span of nine years, now this treatise has been duly recognized through 151 Web of Knowledge Current Contorts in - the hearts of distinguished readers and has beyond doubt achieved the international status. This programme has been undertaken with a view to reinforce the identical efforts to recognize the outcome of meticulous research in some of the very sensible and stirring areas of Molecular Physiology & Biology of Plants. In order to sustain and further advance Plant Physiology, it is dedicated to continue the originality and the introduction of spanking new ideas, ensure that the treatise welcomes the best science done across the full extent of modern plant biology, in general, and plant physiology., in particular, persevere on advancing the quality of what is published, place high value on the quality of production, and be highly attentive

and responsive to the rapidly changing face of academic publishing. In spite of handiness of quick accessibility of vast literature from internet, this treatise series in the field of life sciences has been realized over and above to be like a true guide, friend and philosopher, everlastingly enlightening the most hidden perceptible nerves of an individual worker, which is beyond the competence of mere web service. In Volume 9. with inventive applied research, attempts have been made to bring together much needed twenty review articles by Forty-six contributors from Australia, Belgium, France, Germany, India, Italy and Spain dispersed duly evaluated by the respective Consulting Editors of international stature from India, U.K.:4,, U.S.A., Argentina. Australia, France, Germany, Japan, Spain. Portugal, Israel, and Morocco and rationally disseminated in Nine Sections. Creditably in this volume, over ten important reviews belong to the field of Environmental Stresses besides covering significant areas of research. In reality the treatise is prosperity fir interdisciplinary exchange of information. Apart from fulfilling the firm need of this kind of exclusive edition in different volumes for research teams and scientists engaged in various facets of research in Molecular Physiology and Biology of Plants in traditional and agricultural universities, institutes and research laboratories throughout the world, it would be extremely a constructive book and a voluminous reference material for acquiring advanced knowledge by post-graduate and Ph.D. scholars in response to the innovative courses in Plant Physiology, Plant Biochemistry, Plant Molecular Biology, Plant Biotechnology, Environmental Sciences, Plant Pathology, Microbiology, Soil Science & Agricultural chemistry, Agronomy, Horticulture, and Botany.

journal of plant physiology: *Coffee Science* Akula Ramakrishna, Parvatam Giridhar, Magdalena Jeszka-Skowron, 2022-08-25 *Coffee Science: Biotechnological Advances, Economics and Health Benefits* highlights the important advances in coffee research and an all-inclusive collection of information on the current status of global coffee production and market, sustainable benefits, novel methods and recent developments in coffee metabolites analysis, advancements in coffee processing technology and improvement of coffee quality by fermentation, solid-liquid extraction methods, and post-harvesting processes to improve the beverage quality and produce coffees with different sensory profiles. The book compiles insights into the biotechnological advances to improve coffee quality. It also describes specialty coffees, which are gaining consumer acceptance and enjoying a good global market. This book collates work on the influence of various coffee metabolites such as methyl xanthine, polyphenols, phenolic compounds, indoleamines, biogenic amines, and coffee diterpenes in human health effects such as cardiovascular diseases, cancer, type 2 diabetes mellitus, Alzheimer's disease, and Parkinson's disease. This book is a useful resource for scientists, academicians, and professionals all over the world who are engaged in coffee cultivation, research, business and coffee consumers' health. Key Features Current status on coffee production and the global market Novel methods and recent developments in the determination of coffee metabolites Advancements in coffee bean processing technology and improvement of coffee quality Biotechnological advances to improve coffee quality: The role of molecular markers, tissue culture, transgenic technology, and micro RNAs Effects of coffee consumption on human health Knowledge contributions from acknowledged experts from across the world
