developmental psychology childhood and adolescence 8th edition: Decolonizing Qualitative Approaches for and by the Caribbean Saran Stewart, 2020-02-01 As academics in postcolonial Caribbean countries, we have been trained to believe that research should be objective: a measurable benefit to the public good and quantifiable in nature so as to generalize findings to develop knowledge societies for economic growth. What happens, however when the very word "research" connotes a derogatory term or semblance of distrust? Smith (1999) speaks towards the distrustful nature of the term as a legacy of European imperialism and colonialism. Against this backdrop, how do Caribbean researchers leverage recognized and valued (indigenous) methods of knowing and understanding for and by the Caribbean populace? How do we learn from indigenous research methods such as Kaupapa Maori (Smith, 1999) and develop an understanding of research that is emancipatory in nature? Decolonizing qualitative methods are rooted in critical theory and grounded in social justice, resistance, change and emancipatory research for and by the Other (Said, 1978). Rodney's (1969) legacy of "groundings" provides a Caribbean oriented ethnographic approach to collecting data about people and culture. It is an anti-imperialist method of data collection focused on the socioeconomic and political environment within the (post) colonial context. Similar to Rodney, other critical Caribbean scholars have moved the research discourse to center on the notions of resistance, struggle (Chevannes, 1995; Feraria, 2009) and decolonizing methodologies. This proposed edited volume will provide a collective body of scholarship for innovative uses of decolonizing qualitative research. In order to theorize and conduct decolonizing research, one can argue that the researcher as self and as the Other needs to be interrogated. Borrowing from an autoethnographic ontology, the researcher or investigator recognizes the self as the unit of measure, and there is a concerted effort to continuously see the self, seeing the self through and as the other (Alexander, 2005; Ellis, 2004). This level of interrogation may require frameworks such as Reasonable Humanism in which there is a clear understanding of the role of the researcher and researched from a physiological and psychosocial standpoint. Thereafter, the researcher is better prepared to enter into a discourse about decolonizing methodologies. The origins of qualitative inquiry in the Caribbean can be traced to political and economic discourses - Marxism, postcolonialism, neocolonialism, capitalism, liberalism, postmodernism- which have

challenged ways of knowing and the construction of knowledge. Evans (2009) traced the origins of qualitative inquiry to slave narratives, proprietor's journals, missionaries' reports and travelogues. Common to the Caribbean is an understanding of how colonial legacies of research have ridiculed oral traditions, language, and ways of knowing, often rendering them valueless and inconsequential. This proposed edited volume acknowledges the significance of decolonizing approaches to qualitative research in the Caribbean and the wider Caribbean diaspora. It includes an audience of scholars, teacher/ researchers and students primarily in and across the humanities, social sciences and educational studies. This proposed volume would provide much needed knowledge and best practice strategies to the community of researchers engaged in decolonizing methodologies. Additionally, this volume will allow readers to think of new imaginings of research design that deconstruct power and privilege to benefit knowledge, communities and participants. It will spark key objectives, directions and frameworks for deeper discussions and interrogations of normative, westernized and hegemonic approaches to qualitative research. Lastly, the volume will welcome empirical studies of application of decolonizing methodologies and theoretical studies that frame critical discourse.

developmental psychology childhood and adolescence 8th edition: A Guide to Analyzing and Interpreting ECERS-3 Data Richard M. Clifford, Noreen Yazejian, Wonkyung Jang, Dari Jigjidsuren, 2021 Early childhood is a crucial stage in a child's life, and aspects of the environment in the physical, social-emotional, cognitive, and health and safety domains all play important roles in shaping children's development during these early years. The authors analyze a large database of classroom observations to help ECERS-3 users better understand, interpret, and utilize their own findings. Readers will also see how components of their ECERS-3 data relate to one another, within and across subscales, and within the scale as a whole. A Guide to Analyzing and Interpreting ECERS-3 Data will assist program directors, agency administrators, preK-K teaching coaches/mentors, school principals, researchers, and others who use the ECERS-3 to more successfully document, interpret, and analyze the quality of essential influential factors in an early learning setting. developmental psychology childhood and adolescence 8th edition: The Fable of the Mirrors Xie Weihe, 2024-07-24 This book examines the impact of network society on self-identity and education and proposes key tasks for transforming education in network society. Using the metaphor of the mirror, the book describes the environment and changes in network society based on the internet and information technology. As the diversity and complexity of network society increases, people see more and more self-images in the large mirrors, leading to a variety of developmental orientations and self-identities, as well as more opportunities for objectification. However, this often leads to confusion as to which image in the mirror really represents oneself. This social framework, which forms the backdrop of modern education, poses new challenges for self-identity formation and educational development. The author emphasizes the role of education in constructing a new mirror that can lead children and young people to a better perception of themselves, and thus to self-identification and self-realization. The title will be of interest to scholars and students in the fields of educational theory and sociology of education, as well as general readers interested in topics related to network society, identity, and education.

developmental psychology childhood and adolescence 8th edition: *Embodying Gender and Age in Speculative Fiction* Derek J. Thiess, 2015-10-14 Following scholarship on gender in science fiction, this book explores the limits of considering age as a social construction, positing that an acknowledgement of aged bodies necessarily changes the way we read both age and science fiction. The volume employs contemporary clinical psychology, the biopsychosocial model, to demonstrate that age is an important and neglected topic relevant to the study of speculative fiction. While gender offers a vocabulary, the biopsychosocial approach provides a method to consider age (and gender) as an embodied synthesis of physicality, psychology, and social environment. This respected model of clinical psychology allows a unique and innovative lens through which to read age and the body in literature. Thiess offers readings of established sf classics including Octavia Butler's Parable series; Orson Scott Card's Ender's Game; and cyberpunk authors such as Bruce Sterling, Pat Cadigan, and Neal Stephenson, also exploring more mainstream speculative works including Stephanie Meyer's Twilight series and Joss Whedon's Firefly/Serenity. Visiting topics such as care work, sexuality, sport, and the military in these works, the book demonstrates that acknowledging a more fully embodied age is not only necessary for the individual subject, but will also enrich our understanding of other social categories, including gender and race. Taking a constructive—rather than adversarial—stance, this book does not merely question how much one can ethically and responsibly bend age, but suggests there is a great deal to learn when one explores those limits.

The volume provides a multifaceted perspective on the beneficial as well as the detrimental effects of media exposure on psychological health and well-being. As a first-mover, it will define the field of media use and well-being and provide an essential resource for research and teaching in this area. The volume is structured along four central considerations: Processes presents concepts that provide a theoretical bridge between media use and well-being, such as psychological need satisfaction, recovery from stress and strain, self-presentation and self-enhancement, or parasocial interactions with media characters, providing a comprehensive understanding of the underlying processes that drive psychological health and well-being through media. Moderators examines both risk factors that promote negative effects on well-being and protective factors that foster positive media effects. Contexts bridges the gap between theory and real life by illustrating how media use can influence well-being and satisfaction in very different life domains, covering the full spectrum of everyday life by addressing the public, private, and work spheres. Audiences takes a look at the influence of life phases and life situations on the interplay of media use and well-being, questioning whether various user groups differ with regard to the effects of media exposure. Bringing together the expertise of outstanding international scholars from multiple disciplines, including communication, media psychology, social psychology, clinical psychology, and media education, this handbook sheds new light on the role of media in influencing and affecting emotions.
